

Mounting hardware: quality matters!

Unquestionable quality at affordable prices – this is what our customers expect from the MEYLE brand - and rightly so. When choosing an aftermarket brand the quality of its products should be the guiding principle. Functional reliability paired with long service life depend not only on the spare part itself, but also on the mounting components which are included with the MEYLE parts.

This is why Wulf Gaertner Autoparts AG supplies MEYLE brand-name parts with special top-grade mounting hardware down to every nut, bolt and washer. Our value-added service enables customers to perform all-round professional repairs quickly and reliably.

MEYLE mounting hardware complies with OE quality standards and is included in the standard scope of delivery as shown below. Sets correspond to the individual installation requirements of each part to ensure a snug fit. Anti-corrosion surface finishing provides longer overall part life.

We recommend:

Always use new mounting parts!

The figures show some examples of special nuts required for the installation of MEYLE parts

BMW nut 31 10 6 755 474

To fit the following models:

- BMW 1 Series (E81, 82, 87, 88)
